

BOSCA – AN INTERNATIONAL SUCCESS

From humble kiwi beginnings in the 1970s, Bosca is now a leader on the world stage.

Originally designed and manufactured in New Zealand, word of their quality quickly spread and by the mid 1980s a joint venture had been set up with a manufacturer in Chile.

Bosca wood fires, now fully Chilean owned, have gone on to become an international success story.

Not only are they the market leader in Chile but Bosca fires are now sold widely throughout the USA, Canada, UK and South Africa.

Bosca fires are renowned for their quality construction, clean burn, high efficiency ratings, low emission levels and sleek European styling.

Distributed in New Zealand by Escea – the name you trust for warmth and style.

BOSCA WOOD FIRES ARE ...

Stylish: Bosca fires are both smart and elegant. The traditional tin box is no longer your only option. Bosca's vertical styling and sophisticated curves give a distinct European flavour to their design.

Convenient: Wood is stacked neatly beneath the stove for easy access.

Efficient: High fuel-to-heat ratios place Bosca among the top wood fires available on the market today.

Green: Bosca's revolutionary integrated combustion plate and secondary air system result in low emission levels, helping protect the environment.

Clean: A built-in ash tray is a handy and convenient tool for use when clearing ash from the fire.

Replaceable: Bosca's robust 25mm thick refractive fire bricks are standard across all models, so you will always be able to buy replacements.

Durable: Twice the weight of most other wood fires, the construction quality makes Bosca fires extremely long-lasting. They are made of folded steel plates fully welded together. The surfaces are painted with high temperature-resistant paint, specially treated for maximum adhesion.

Safe: 5mm thick ceramic glass doors are resistant to high temperatures and heat shock, while still allowing a good view of the interior flames.

Compliant: Bosca wood fires do not require an insulating floor protector and meet the requirements of the relevant Australian/New Zealand Standard.

With emissions below 1.0g/kg Bosca fires are suitable for use in most areas of New Zealand.

REINVENTING THE WOOD FIRE

Bosca wood stoves come with a full five-year warranty on the firebox. For full warranty conditions see installation manual.

Due to our programme of continuous improvement Specifications may change without notice. Performance may vary from stated values depending on actual operating conditions

BOSCA[®]
REINVENTING THE WOOD FIRE

FIREPOINT 360

Need a fire to fit a corner or small space? Choose the Bosca Firepoint 360.

Curved sides sweep down to the floor, mirroring the circular shape of the flue.

This alternative to the traditional square box wood fire is the smallest of the range making it ideal for rooms where space is tight, or the fire must fit into a corner.

Wherever it is placed, your Firepoint will become the central focus of the room.

Stylish and elegant, this wood burning stove will complement and enhance the ambience of your home.

Specifications

Minimum to Combustible walls (A)*	195mm
Minimum to Combustible walls (B)	340mm
Minimum to Combustible walls (C)	320mm
Emissions g/kg	0.9
Efficiency	74%

*With optional fireplace rear heat shield

LIMIT 380

The economically priced Limit 380 is the top selling model in the Bosca range thanks to its excellent efficiency rating coupled with a conventional pedestal look and moderate size.

Despite a more conventional silhouette, the Limit's smart styling details and deft finishing touches ensure this fireplace is a standout feature in any room.
